-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 30 October 2006.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-30 and 33-35 is/are pending in the application.
  - 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-30 and 33-35 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 01/29/2004 is/are: a) accepted or b) objected to by the Examiner.
 

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2812

## **DETAILED ACTION**

Applicants' response of 10/30/2006 has been entered in the record and considered. With respect to the rejections under 35 USC 103, the applicants' arguments have been considered but they are not persuasive for the reasons as discussed below. Claims 1-30 and 33-35 are rejected. Currently claims 1-30 and 33-35 are under consideration.

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 2812

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**Claims 1-30 and 33-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burke et al. (US 2005/0186782, dated 8/25/05, filed 12/23/02) in view of Weidman et al. (US 2003/0176058, dated 9/18/03, filed 3/18/02) and further in view of Wang et al. (US 2005/0110152, dated 5/26/05, effectively filed 11/13/02).**

Burke shows the method as claimed in figures 3A-3K and corresponding text, as providing a substrate with an insulating layer 304 over the substrate; providing a first level of conducting material 305 defined and embedded in the insulating layer over the substrate (fig. 3A); depositing an IMD layer 310/312/314/316 over the insulating layer; forming a bi-layered hard mask (318/320) over the IMD, the hard mask comprising a first layer (BARC 320) overlying a second hard mask layer HM2 (silicon oxide capping layer 318; [0038]), patterning the IMD layer and hard mask layers, and etching to form

Art Unit: 2812

via openings extending through the IMD and the hard mask layers (Fig. 3E); forming a layer of via-fill material of BARC coating 326, the via-fill material filling the via openings (fig. 3G); patterning the via-fill material, IMD and hard mask layers, and etching to form trench openings (fig. 3I); and stripping-off the via-fill material after forming the trench openings (figs. 3I,3J), thus forming open trench and open via regions for subsequent conducting metal fill 334. Low-k dielectric is used [0037]-[0038]. Cu is used as the metal fill, a Cu seed is used and planarization by CMP is used [0042].

Burke lacks anticipation only in not explicitly teaching that the BARC layer 320 is a hard mask layer (HM1) (so that the bi-layered hard mask layer is made of rIM1 and HM2); the BARC is formed with photoresist; the substrate is semiconductor single crystal silicon or an IC module; the hard mask layers are formed of SiN and SiC; the thicknesses of layers, the etching formula, repeating the steps to form multiple layers of interconnect, cu seed layer in the trench and via openings, forming excess copper metal over the copper seed layer and then planarizing the excess copper, and, MOSFET CMOS memory and logic devices.

Weidman teaches, in figures 1A-1H, and corresponding text, in a similar structure, a substrate 2 including insulating layer 6 with embedded conductor 4, IMD 16, bi-layered hard masks 20 and 22 (formed of SiC and/or SiN; [0009]) and an overlying BARC 24. The bi-layered hard mask and IMD layers are patterned and etched to form open via and trench openings (figs. 1E-1H) for subsequent conducting metal fill. The second hard mask is formed over the first hard mask in order to protect it [0030]-[0033].

Art Unit: 2812

Wang teaches, also in a similar structure, explicitly, that the BARC is a type of photoresist that does not have photosensitivity ([0025] - [0028]. The BARC is treated as a type of photoresist and even is removed with the overlying photoresist because of its resist/polymer material.

It would have been obvious to one of ordinary skill in the art to have used the bi-layered hardmask layer under and in addition to the BARC layer, in the method of Burke, as taught in the method of Weidman, with the motivation that the bi-layered hard mask provides a protective top layer over the bottom hard mask layer during subsequent etching and processing steps.

It would have been obvious to one of ordinary skill in the art to have had the substrate be formed of semiconductor single crystal silicon or an IC module, in the method of Burke, with the motivation that these materials are conventional substrate materials suitable to support the dielectric inlaid metal layer.

It would have been obvious to one of ordinary skill in the art to have had formed the BARC layer of photoresist and to have filled the via openings with photoresist, in the method of Burke, with the motivation that treated or specific types of photoresist are conventionally used as BARC layers and photoresist has also been commonly used to fill a via to facilitate patterning of an opening, especially of the damascene type in an insulating stack. The use of photoresist as a BARC film and to fill the via would make the process more efficient in that less materials would have to be used. Additionally, it would have been obvious to one of ordinary skill in the art to have formed the BARC of resist and to have filled the via openings with resist, in the method of Burke, with the

Art Unit: 2812

motivation that Wang teaches that BARC is a type of photoresist which has been treated to not have the photosensitivity and, Wang even refers to the overlying photoresist as a second photoresist.

It would have been obvious to one of ordinary skill in the art to have had the claimed ranges of thicknesses of layers, and the claimed materials of the hard mask stack, the etching formula, to have repeated the steps to form multiple layers of interconnect and, to have had MOSFET CMOS memory and logic devices, in the method of Burke, with the motivation that Weidman teaches that the materials for hard masks may be combined differently according to the materials, and with the motivation that these parameters are within the scope of conventional processing parameters and well known to those of ordinary skill in the art, as is the inclusion of MOSFET CMOS memory and logic devices in the substrate beneath the interconnect is conventional as well and obvious to one of ordinary skill in the art. Also, see Wang for typical/conventional thicknesses of layers.

### ***Response to Arguments***

Applicant's arguments filed 10/30/06 have been fully considered but they are not persuasive. The prior art of record shows the claimed invention as described in the previous paragraphs.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2812

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohsen Ahmadi whose telephone number is 1-571-272-5062. The examiner can normally be reached on Mon-Fri 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on 1-571-272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
